

# SDVI Rally Access™

## Metadata-assisted Content QC and Compliance

Work smarter and faster using time-based metadata to focus on the task at hand.

- Assisted QC & correction
- Compliance & distribution versioning
- Content segmentation
- Caption review & validation
- Manual metadata logging
- Project & EDL export and cloud render

Well-designed supply chains don't just automate tasks: they also help operators be more effective. Rally Access helps operators work smarter, faster, better by linking automated supply chain functions and the metadata they produce to the manual tasks they require. Presented either as a panel in Adobe® Premiere Pro® or in a Rally Gateway with Accurate.Video Validate, Rally Access combines content and metadata on the timeline, guiding users to exactly the right moment and track where content requires their attention.

Driven by the Rally workorder capability, manual tasks are displayed either in Adobe Premiere Pro or in a Rally Gateway, complete with time-based metadata from prior automated processes. This means all automated QC events, content markers, segment timings, and AI analysis results are available directly within the operator's work environment, pointing to the specific areas that need review, dramatically reducing completion times.

For operators, completing the task at hand may be the smallest part of the job: preparing to work and documenting what was done can often take more time than the task itself. Rally Access prepares the job for you. It puts the content, test results, in and out points of each task, and other crucial metadata all in one place. Workorders are presented as clickable "go-to" buttons, eliminating the time and frustration of finding clips and locating issues. Using Rally Access, operators get more done with greater accuracy, produce better documentation, and ultimately contribute to a better finished product at a lower cost.

**"SDVI and AWS' technology allows us the flexibility and scalability to create new linear and direct-to-consumer products exponentially faster than we could in the past."**

 Discovery

## Rally Access panel for Adobe Premiere Pro

The Rally Access panel for Adobe Premiere Pro makes all workorders available directly inside the Adobe Premiere Pro interface. Click on a workorder and Rally Access automatically compiles all media and metadata necessary for the task, placing them on the timeline and allowing operators to get to work immediately. The Rally Access panel streamlines tasks from manual QC and compliance review to compliance editing and craft edit sessions. All new metadata, edits, and effects are synced directly back to the Rally Platform. Through integration with Adobe Media Encoder, a new version can be rendered automatically as a new asset or added back to the original asset, while retaining the original content and all project metadata – all without ever leaving your supply chain.

With the Rally Access panel for Adobe Premiere Pro, operators and editors can work in a familiar environment, more efficiently, and with the full functionality of Adobe Premiere Pro, including all format, audio and subtitle support. Work locally or in the cloud, with proxy or high-res media, without changing your normal workflow.

## Rally Access with Accurate.Video Validate

Prefer the flexibility of working in a web browser? Rally Access allows operators to select tasks and open them using integrated Accurate.Video – without ever leaving the browser. All segment, QC, and ML metadata are presented in an interface that is easy to understand and operate. Verify all incoming metadata and add additional metadata as needed to complete the task at hand. Work on proxy media, including additional audio and subtitles from within the browser. Once the workorder is completed in Accurate.Video, the Rally Platform allows the content to continue seamlessly through the supply chain, verifying the metadata produced in the session and intelligently deciding the next steps necessary to complete the process.

*The Rally Platform supports multiple player and edit applications. This table highlights the feature differences between the available options.*

	Rally Player	Accurate Player	Accurate.Video	Adobe Premiere Pro Panel
Frame accurate proxy playback	●	●	●	●
Hotkey support, offspeed playback	●	●	●	●
Timecode display	●	●	●	●
Workorder support	●	●	●	●
Audio channel selection		●	●	●
Discrete audio file support		●	●	●
Discrete subtitle file support		●	●	●
Audio VU-metering			●	●
Manual markers and segmentation			●	●
Timeline view			●	●
QC and compliance review			●	●
Custom status for workorder result			●	●
TBMD import and export			●	●
HighRes and Dolby support				●
Multiple, customisable report output				●
Individual TBMD permissions				●
Edit and EDL support				●
Auto render in the cloud				●

## Benefits

### Smart Work Assignments

Rally Access automatically generates, organizes, assigns, and presents manual tasks in to-do lists based on the definition of the supply chain. Jobs can be routed to specific operators or presented to a group to be “claimed” by anyone on the team. Operators are presented with their assigned jobs, down to the type of task within a clip: one operator might evaluate QC findings while another works on legal compliance tasks.

### Supply Chain Continuity

Integrating manual steps as part of the overall supply chain is key to maintaining efficiency. Otherwise, manual activities become weak or broken links in the supply chain—isolated, un-trackable, and inefficient. When a task is completed in Rally Access, the supply chain continues, and the completed work is documented automatically to benefit downstream supply chain steps.

## Features

- Automated supply chain rules track and assign manual tasks
- Instantly locate segments and tracks associated with workorders using time-based metadata
- Support content proxies to keep content in the cloud or full-resolution content for detailed work
- Full visibility and prioritization of work in progress
- Automatically measures and reports on job efficiency
- Built-in, customizable templates for multiple task types - QC, compliance, segment timing, edit Exports and renders EDLs

## Use Cases

- Receipt
- Localization
- Logging
- Modification

## About Rally

The Rally Media Supply Chain Platform deploys all the applications and infrastructure to create a dynamic, responsive media supply chain. These resources can be located on-premise, in a public cloud, in a private cloud, or in any combination.

Rally cloud-native media supply chain management allows you to build, configure, operate & monitor media supply chains at any scale. In the Application Services Market, choose from a comprehensive ecosystem of best-in-class tools for file transformation, QC, ML, security, and content delivery – paying only for what you use. Rally also supports your custom integration through open APIs, messaging or the extensible Rally development environment.
